

# Experiment 2

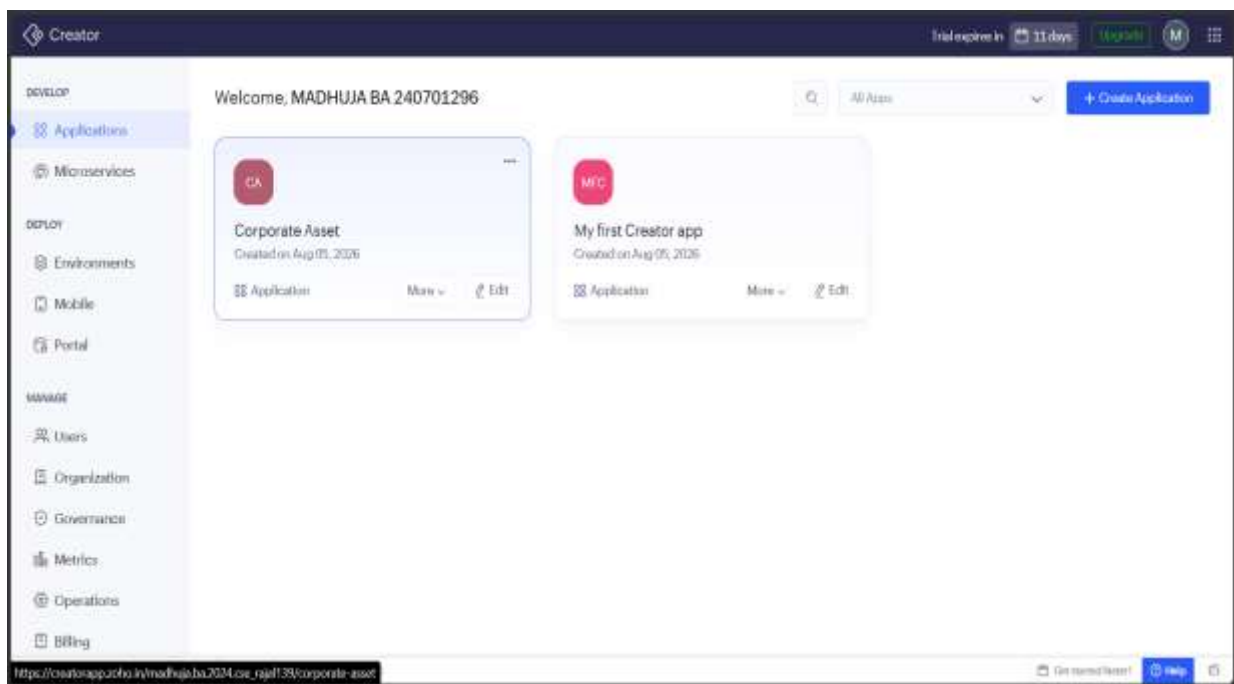

## 1. Aim

To set up a Zoho Creator account, create a sample application, and explore the platform architecture and user interface, including the Develop, Deploy, and Manage sections.

## 2. Setting up Zoho Creator

### Step 1: Creating a Zoho Creator Account

1. Open a web browser and visit the Zoho Creator website.
2. Click on Sign Up or Get Started.
3. Create a Zoho account using a valid email address.
4. Log in to the Zoho Creator platform.
5. After successful login, the Zoho Creator home page is displayed.
6. From the home page, a new application can be created.

### Step 2: Creating a Sample Application

1. Log in to Zoho Creator.
2. Select Create Application.
3. Choose the option to create an application from scratch.
4. Enter the application name as Corporate Asset Maintenance.
5. Click Create.

6. The application builder opens, where different components such as forms, reports and pages can be created.

### Step 3: Creating the Repair progress Form

1. Open the Corporate Asset Maintenance application.
2. Go to the Develop/Build section.
3. Select Form.
4. Create a new form.
5. Name the form Repair progress.
6. Add the following fields.
7. Save the form.

The screenshot displays the 'Corporate Asset Maintenance' application builder interface. The main workspace shows a form titled 'Repair ID' with several fields: 'Maintenance Request', 'Technician', 'Repair Status', 'Repair Start Date', 'Repair End Date', and 'Remarks'. A 'Basic Fields' panel on the left lists various field types like Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, and Drop Down. A 'Field Properties' panel on the right shows settings for the selected 'Repair ID' field, including field name, link name, validation, and appearance. The bottom status bar indicates a trial expires in 11 days and provides links for upgrade, get started, and help.

### Step 4: Creating the Repair Progress Report

1. Open the Corporate Asset Maintenance application.
2. Go to the Develop/Build section.
3. Select Report.
4. Create a new report using the Repair Progress form as the data source.
5. Select a suitable report format such as a table/list report.
6. Name the report Repair Progress Report.
7. Save the report.
8. Add a few sample records using the Repair Progress form.
9. Open the report to view the stored records.

**Repair Progress**

Maintenance Request: 2

Technician: rahul s

Repair Status: Choice 2

Repair Start Date: 12-Aug-2026

Repair Start Date: 18-Aug-2026

Repair End Date: 24-Aug-2026

Remarks: ON Progress

**Submit**

**Repair Progress Report**

| Repair ID | Maintenance Request | Technician | Repair Status | Repair Start Date | Repair Start Date | Repair End Date |
|-----------|---------------------|------------|---------------|-------------------|-------------------|-----------------|
| 2         | 2                   | rahul s    | Choice 3      | 04-Aug-2026       | 04-Sep-2026       | 01-Sep-2026     |
| 1         | 2                   | rahul s    | Choice 2      | 12-Aug-2026       | 18-Aug-2026       | 24-Aug-2026     |

## Steps for Creating a Dashboard in Zoho Creator

1. Log in to your Zoho Creator account and open the sample application.
2. Go to the Dashboard or Pages section from the application builder.
3. Click Create New and select Dashboard/Page.
4. Enter a suitable name for the dashboard.
5. Open the dashboard editor to start adding components.
6. Click Add Component and select the required component, such as Chart, Report, Panel, or KPI.
7. Select the form/report from which the dashboard should obtain its data.

8. Choose the required chart type, such as bar chart, pie chart, line chart, or summary.
9. Configure the required fields, labels, filters, and display settings.
10. Arrange and resize the components on the dashboard according to your requirement.
11. Save the dashboard and preview it to check the appearance and data.
12. Publish or access the dashboard through the application when it is ready.

## **Exploring the Platform Architecture and Interface**

### **Develop**

The Develop section is used to build and customize the application. It allows users to create forms, reports, pages, workflows, and other application components.

It also provides tools such as Deluge scripting to add logic and automate application functions.

### **Deploy**

The Deploy section is used to make the application available to its intended users. Applications can be published and accessed through web browsers or supported devices.

It also helps configure application access, permissions, and user-related settings.

### **Manage**

The Manage section is used to maintain and control the application.

It provides options for managing users, permissions, application settings, data, and security.

It helps administrators monitor the application and make changes when required.

### **Result**

Thus, a Zoho Creator account was successfully set up, a sample application was created, and the creation of forms, reports, and dashboards was explored. The Develop, Deploy, and Manage sections of the Zoho Creator platform were also studied.
